

Writing for Video with AI

For a 30 second feed clip, a 10 minute explainer or a full course. Works in Claude, ChatGPT or any assistant you like.

150

Courses on LinkedIn Learning.

3M+

Learners across those courses.

3x

Output, same hours. One big course a month became 2 to 3 short videos a week.

~200K

Learners on AI Trends, close to 10K bookmarks. It ships while the topic is live.

Build your writing files LIVING DOCUMENTS

Give the AI a clear picture of you, your audience and your formats. Four small files do it, and they get better every time you write. My free **Writing Companion** skill walks you through building them.

EVERYTHING YOU WRITE

Soul file

Your voice. How you sound and what you believe: tone, energy, point of view, rhythm, humor.

Mine: warm, direct, short sentences, and sure these tools make you superhuman.

Starter: voice and rules

EVERYTHING YOU WRITE

Rules file

Your do's and don'ts: words to avoid, punctuation, terms, links, hashtags and how you end.

Mine: no em dashes, no hype, no hashtags.

ONE PER SERIES

POV statement

The promise: who it is for, the question every episode answers and what viewers can do after. Mine for AI Trends:

Respect their time

Filter ruthlessly

Real demos

No algorithm chasing

Positive outlook

Starter: series promise template

ONE PER FORMAT

Format files

A template plus short writing instructions for each kind of piece. One series can use several.

Feed clip

Long video

Post

Newsletter

Starters: scripts, posts and more

Every piece you write pulls from all four feed clip, explainer, course, post

Improve them after every piece

Keep them alive THEY ARE NEVER DONE

- 1 Start from real work.** Give the AI 2 or 3 pieces that sound like you. Ask it to describe your voice, then correct what it gets wrong. No samples yet? Have it ask you a few questions and write two different openings so you can pick.
- 2 Keep only what you confirm.** The AI's guesses stay out of your files until you say yes.
- 3 Update after every piece.** Ask the AI to compare its draft with your final and suggest up to three lessons. Keep the lasting ones.
- 4 Put each lesson in the right file.** A habit goes in your soul or rules file. A series need goes in the POV statement. A fixed fact stays with that piece.
- 5 Save the old version.** If a change makes your drafts worse, roll it back.

Put them to work PICK ONE SETUP

Just starting? Paste them in

Paste your files at the top of a new chat. It works anywhere, but you repeat it every time. No files yet? Try the **prompt series**.

BEST FOR RECURRING WORK

A Project with a custom instruction

Create a Claude Project, or a ChatGPT Project. Add your files as project knowledge. Then paste the custom instruction below so every chat checks them.

Everywhere: a skill

Package your files as a skill. It loads whenever you write, in any chat. Claude supports skills, and so do some ChatGPT plans. Start with **Writing Companion**, free on GitHub.

CUSTOM INSTRUCTION FOR YOUR PROJECT

Before you write anything, read my soul file, my rules file and the POV statement for this series. Write in my voice and keep the series promise. Before you show me a draft, check it against all three and fix what does not match. Ask me no more than three questions at a time. Never invent experiences, results, quotes or sources. After I edit a draft, suggest up to three changes to my files and say which file each belongs in.

Prompts to get started

COPY, PASTE, FILL THE BRACKETS

Short versions from my Writing Companion skill. The **full prompt series** has ten, from finding your voice to saving your profile.

1. FIND MY VOICE

Here are three things I wrote that sound like me. Describe my voice: tone, energy, point of view, rhythm and humor. Separate what you can see from what you are guessing. Then write two short openings about [topic] in that voice so I can pick one.

2. WRITE MY POV STATEMENT

Help me write the promise for my series [name]. Cover who it is for, the question every episode answers, what viewers can do after watching, and what is out of bounds. Ask me no more than three questions first.

3. DRAFT A SCRIPT

Using my soul file, rules file and POV statement, write a [60 second] script for [platform] about [topic]. Write for the ear, one idea at a time. Note what is on screen for each line. In demos, never predict what the AI will answer.

4. LEARN FROM MY EDITS

Compare your draft with my final version. Suggest up to three lasting changes to my files. For each one, show the edit you saw and say which file it belongs in, or whether it only applies to this piece.

5. MAKE A COMPANION POST

Turn this script into a LinkedIn post for the video. Reflect what is in it, tease what viewers will see, and give one useful takeaway that stands on its own. Do not reuse the script's opening. Follow my rules file.

6. SET UP A NEW FORMAT

Help me create a reusable format for [feed clip, newsletter, post]. Give me a template for the structure and separate writing instructions. Test them on a short real piece before I save them.

Let AI do the heavy lifting

RESEARCH, OPTIONS, REWRITES, VISUALS

Research

Give it your links and notes. Ask for a short brief with the facts, dates and sources you need, plus what still needs checking.

Options

Select a paragraph and ask for 5 versions in your voice. For titles, ask for 10. Pick one, or mix two.

Rewrite one part

Highlight a line and say what to change, like "make this transition about how we got here." It rewrites only that part, in your voice.

Visual ideas

Ask what to show for a section. You get options like a table, a timeline, cards or a chart, plus prompts for illustrations.

Learn from your edits

After you edit, ask which lessons to keep and where each belongs: your soul file for every piece, or the series file for just that series.

Format for recording

Keep spoken lines, on-screen visuals and recording notes apart, so a teleprompter shows only the words you say.

Check every draft against your files

YOUR CONTRACT WITH THE VIEWER

CHECK	WHAT IT ASKS	CHECKS AGAINST
Voice	Does it sound like me: rhythm, tone and word choice?	Soul file
Rules	Any banned words, punctuation or formats?	Rules file
Promise	Does it deliver what this series promises the viewer?	POV statement
Evidence	Is every claim supported? What needs my confirmation?	Your sources
Specific	Could this line belong to anyone? Make it specific or cut it.	Your experience
Read aloud	One speaking beat per paragraph, about 25 to 60 words.	Format file
AI demos	Does it assume what an AI will answer? Keep the demo open.	The live recording
Performance	Does it match what has worked with your audience before?	Your analytics rubric

COPY THIS CHECK PROMPT

Check this draft against my soul file, rules file, POV statement and performance rubric. Then check evidence, specific detail and read-aloud pacing. For each problem, quote the line, name the check it fails and suggest a fix in my voice. Leave the lines that pass alone.

Write for the ear and the screen TIPS THAT HOLD UP ON CAMERA

- 1

Write with visuals in mind. Attention spans are short. Next to each paragraph, note what is on screen: a demo, a chart or a screenshot. If nothing fits, that part is probably too long.
- 2

One point per video. A feed clip makes one point. A longer video walks through one task. Two points? Make two videos.
- 3

Check the length before you record. Most people speak about 150 words a minute. A one minute clip is about 150 words. A 10 minute video is about 1,500.
- 4

Open with the payoff. Skip the welcome and the agenda. Start with what people will be able to do, then get to the demo fast.
- 5

Talk to one person. Use "you," contractions and short sentences, the way you would explain it to a friend.
- 6

Let the screen do the showing. People can see what you click. Use your words to say why it matters.
- 7

Don't promise what the AI will say. AI answers change every time. Write what you will try and what to look for, then react to what really happens.
- 8

End with one thing to remember. Skip the recap. Leave people with one takeaway or one thing to try.
- 9

Read it out loud. If you trip on a line or run out of breath, shorten it.
- 10

Keep it real. No made-up stories, quotes or numbers. Link every claim to where it came from.

What a script looks like EXAMPLE

SPOKEN	For years, AI waited for you to type. That's changed.
ON SCREEN	A timeline of the tools that changed it.
SPOKEN	Let's see what it does when I hand it a whole folder.
RECORDING NOTE	Open the demo folder. Run the prompt. Pause on whatever comes back.

Your script is a draft
Like a movie, a video gets polished three times. Nothing is set in stone until you publish, so improvise, rewrite and change things along the way.

Write
You write it the way people read. That is a solid first draft.

Record
Say it out loud and you hear what doesn't sound like you. Change it on the spot.

Edit
AI clears the pauses and retakes. You look for ways to make it shorter and tighter.

Publish
Now it's set.

Same idea, said out loud A REAL BEFORE AND AFTER

AS I WROTE IT In real life, the folks with the most PhDs don't always win. Usually it's the practical ones. The people who show up, work hard, and know how to get the job done. That's Gemini Flash. Not the valedictorian, not SOTA. It's the blue-collar model with the best tools in the shop. Not the brightest one in the room. Maybe the smartest choice.	AS I SAID IT ON CAMERA I'm speaking from experience, almost all my applications use Gemini as the model inside. But like with people, the smartest models aren't always the most successful. It's the practical ones, the ones who show up, work hard, and know how to get the job done. That's the Gemini Flash family.	WHAT CHANGED - Added a real experience - Kept the core idea word for word - Dropped the lines that only work on paper - Ended sooner
--	--	---

Organize and improve CLOSE THE LOOP

- Organize it.**
Turn your files into skills, like **Writing Companion**. Use one Project per series. Keep it all in an editor like **Obsidian** and let Claude or ChatGPT update it.

Build a performance rubric.
Pull your numbers from Publer or another social aggregator. Have AI turn your best posts into a rubric to check drafts against.

Track time to relevance.
Count the days from "this topic matters" to "people can watch it." Speed and relevance go together.

Keep the human parts.
Knowing what your audience needs right now, framing the question, and judging what is useful in practice.
